

Mini-project assignment: MS1b Statistical Data Mining

Unfortunately, one column in the original version of the file "LocationTimeType.csv" was not correct. This was spotted and corrected yesterday (17-02-2011). The corrected version is available at <http://www.stats.ox.ac.uk/~meinshau/MS1/miniproject/>

The column that has been corrected (the column labelled "Type") was referred to incorrectly in the second bullet point on page 1 and in Task 4, and both of these references have been corrected in the attached corrected version of the assignment.

Corrections to the Statistical Data Mining mini-project

1. The last column of the file LocationTimeType.csv (the column labelled Type) originally had all entries equal to 5, whereas the entries should be 1 or 2. This has now been corrected.
2. The file LocationTimeType.csv has four columns (Location, DayOfYear, Weekday, Type) and not just the three columns (Location, DayOfYear, Type) mentioned in the original assignment. Consequently, the class variable Type you need in Task 4 is the fourth column in this dataset and not, as erroneously stated in the original assignment, the third column. This is corrected in the attached version of the mini-project.
