2. Project description

2.1. Scientific relevance

In this project the emergence of effective group norms is studied in pupils' social networks at secondary schools. The norms studied are restricted to social behavior of pupils, more precisely, the way pupils use social rules in three areas which are very important to them: school, peer group, and the outer (adult) society. In this study, social rules at schools refer to making homework and truancy; social rules in the peer group refer to trust and reciprocity; and social rules in the outer society refer to social action and delinquency.

The relevance of group norms at school is illustrated by a classical study of Willis (1977). He uses the concept of anti-school culture (which is broader than norms per se), and shows how working class pupils first generate such a set of norms and then may be affected by it, eventually leading them to becoming dropouts. His study shows that anti-school norms can develop, and that they can be effective, i.e., influence behavior; and that school norms are strongly related to the other norms about social behavior.

The question of development of norms can hardly be treated without discussing the dynamics of networks and behavior. According to Coleman (1990), norms can come into existence when individual behavior has externalities (i.e. effects on other individuals) and when there is the possibility of sanctioning (cf. project 3, and related rational-choice explanations for the emergence of norms, e.g., Voss 2000, 2001). Being subjected to consequences of others' behavior and having the possibility of sanctioning takes place in the context of the social embeddedness in networks. The development of norms influences the extent to which group members perform the behavior in question, but the norms are also influenced by the behavior itself being observed by group members and by the observed sanctions. The decision to carry out sanctions again is influenced by the individual's network position and status, and will feed back upon this status (a successful sanction will tend to increase, an unsuccessful sanction to decrease the status of the sanctioning person).

Pupils avoid actual sanctions by comparing their intended behavior to norms of others, and using this in choosing how to behave. Two kinds of reference processes are relevant here: normative and comparative references (also see Guldemond, 1994). In normative references pupils compare their own behavior with group norms (Homans, 1950). In comparative references they compare their behavior with that of significant others (Festinger, 1954). When a little delinquent subgroup exists in a non-delinquent class, comparative references could stimulate a group member to shoplifting, but normative references would not. This illustrates that it is important to compare the effects of groups and subgroups.

Social network research is essential for the study of group norms (cf. Friedkin, 2001). However, empirical scientific studies of development of norms in networks of adolescents are rare. Hallinan started to study pupils' networks in the 70's and 80's (for an overview see Hallinan & Smith, 1989). Most studies are descriptive (like Hallinan's). Recently, researchers started to tackle the topic of influence of the network on individual behavior and individual norms (see for instance Bender & Lösel, 1997, Reed & Rose 1998, Houtzager & Baerveldt, 1999, about the effect of peer relations on delinquent behavior). No empirical studies of the creation of norms have been carried out in which the mutual influence between behavior and relational networks were traced longitudinally. Our research question, accordingly, is quite basic:

What conditions facilitate the development of effective group norms in pupils' social networks in the first years of high school; and what induces the content of these norms?

2.2. Elaboration of the problematic

Group norms in social networks may or may not develop. When group norms do not develop, pupils' individual norms (attitudes) vary much and the chance that behavior is sanctioned is small. In this case it is possible that social network dynamics do not have any effect on norms. The attitudes within pupils' networks then could reflect, e.g., the aggregated backgrounds of the pupils, especially the norms inherited from parents. This would mean that the pupils' network plays no role in the development of norms, the individual pupil's norms developing from other reference groups like family, school, or neighborhood. This is indeed the (often implicit) assumption of many studies on social norms. However, in many situations there will develop group norms.

When group norms develop, they bring about a leveling of attitudes and a perception of sanctioning. The power of group norms is that pupils can trust others to sanction 'bad behavior' or back up their own sanctions. The development of such trust is intertwined with the development of the social network and cooperation (cf. project 3; see also Snijders, 1996, section 1.4). However, there are theoretical arguments that also when sanctioning is expected, pupils might act in conflict with the norms. From ASE-theory (see project 5), e.g., we could predict that pupils would deflect more if their attitudes deviate more from the norm, social costs of deflecting are less, and their self efficacy is stronger. From this, we could conclude that norms are less effective when attitudes vary more. Also, it could be predicted that norms are less effective in loose networks, and that norms are less effective for pupils who are less dependent on others, like high status pupils and loners. Furthermore, we could conclude that for pupils with a low educational level, positive group norms about peer interaction are more effective than about school behavior because they perceive that they can improve their behavior with peers more easily than their school behavior.

Aside from the question when norms are effective, it is still an open question which network characteristics are conducive for the development of group norms. According to Coleman (1990), effective group norms develop when the ties in networks are strong and the networks are closed. This is consistent with arguments from Coleman & Hoffer (1987) who state that in closed networks costs of information and sanctions are lower, which makes it easier to maintain effective group norms. From this, it could be predicted that group norms will arise more easily in cohesive and intimate pupils' networks. However, the relevant others do not necessarily have to comprise all the members of the network. Baerveldt and Snijders (1994) suggest that a social network can be segmented into subgroups, which would lead to stronger norms within the subgroups, while the content of norms could differ strongly between the subgroups. It seems that Coleman & Hoffer's arguments can also be used for subgroups: when subgroups within the pupils' networks are cohesive and intimate, group norms within those subgroups develop more easily. It is not easy to predict the content of the norms, especially when pupils' networks are segmented, because pro-social norms may develop as easily as anti-school norms.

The pupil's network is bigger than the pupils' network. Parents and teachers are also part of a pupil's network. Therefore, when parents and teachers are important, Coleman & Hoffer's arguments should be extended to these bigger networks. This means that the whole network of pupils, parents, and teachers should be closed to produce a group norm shared by all. As the attitudes of parents and teachers are mainly those of the dominant society, the group norms accordingly will be the same. According to Bronfenbrenner (1979) and Bronfenbrenner & Gecci (1994), congruence between social norms of different social networks (like home and school) of children facilitates a development according to dominant norms. This agrees with a classical theory of Coleman (1961), who states that when schools have a stable and visible network of

parents (when they are a ‘community’), the norms of the whole school population are those of the parents, whereas in other cases the norms of popular pupils dominate.

Coleman’s community hypothesis has been questioned in social network research. Empirical results are not decisive (e.g., Dijkstra, 1997; Dijkstra & Veenstra, 1999). According to a study of Baerveldt (1992), Dutch secondary schools hardly differ systematically with respect to delinquency, integration of pupils, or school climate. However, Dijkstra (1992, 2001) concludes that in Reformed schools, school climate can have a substantial effect on school motivation of pupils. Morgan & Sorensen (1999) state that the latter type of school can favor positive school norms because they produce more opportunities for information and resources (see also Granovetter, 1973). Their arguments reflect a recent discussion in social network research about the value of open versus closed networks.

2.3. Methods and techniques of research

We collected the longitudinal data at four time points with three month in between in the academic year 2003/04. The data was gathered with the help of standardized questionnaires from pupils in first grade of secondary school (brugklassers). In total 126 classes in 14 schools participated. The schools are spread out in the Netherlands. They were chosen from a data set containing all Dutch secondary schools after excluding 10% of the smallest and 10% of the biggest schools. Some randomly selected schools were informed about the study and were asked if they would like to participate. From the schools that were willing to participate we chose public schools and those with different kind of denominations and schools from different areas. The main selection criterion were the educational tracks of the classes. We tried to match the percentage of classes of one educational track based on the previous year with the national percentage of this educational track. In the end this did not work out as the number of educational tracks per school can vary very easily from one year to the next.

The first survey took place in the first few weeks after the beginning of the new academic year in August/September. Trained assistants visited the schools and distributed the questionnaires for pupils. They gave explanations about the purpose and the way to handle the questionnaire. They were available for questions throughout the time the pupils filled in the questionnaire. These questions and comments from pupils were written down and considered before the next measuring. The questionnaire was pre-tested in a small pilot study and subsequently adjusted. The big majority managed to finish the questionnaire within 40 minutes. There were no big differences between pupils of different educational tracks.

The pupils’ questionnaire includes items about reciprocity and trust (cf. project 3), homework and truancy (Bosker & Hofman 1994), social action and delinquency (Baerveldt 2000), about related norms/attitudes (cf. project 5, see also Scheerens and Bosker 1997), expected acceptability and sanctions by fellow pupils, school, and parents, and about self-efficacy (project 5; also see Dijkstra & Kassenberg, 1999). The extent to which norms are a group phenomenon is reflected by intra-group correlations in the attitudes, combined with (aggregated) expectations about sanctions.

The actual existence of relationships between pupils is measured by using dyadic social network items in the questionnaire. The items concern shared activities, social support, friendship, intimacy, trust, and sanctions. For each item, pupils can nominate fellow pupils in the same class. Thus, for each item, the pupils in each class constitute a pupils’ network (Houtzager & Baerveldt, 1999, Baerveldt, 2000).

The site observations provide additional information about school integration and cohesion, and educational politics. In addition, data on the pupils and on school organization are gathered from the administration, and data on collective activities of pupils are collected. The extent to which a school community exists is measured by the number of overlapping network contacts, and aggregates of pupils' perceptions (Dijkstra & Kassenberg, 1999).

The non-response number for pupils were: for V wave: 67; for W wave: 215; for X wave 184 and for Y wave 133. The non-response number for teachers were: for V wave: 5; for W wave: 8; for X wave 15; and for Y wave 42.

Three approaches to analyzing the development of the pupil's attitudes will be followed. The first is a straightforward multilevel approach (Snijders and Bosker 1999), taking into account the correlation between pupils in the same class or school, but not the network effects. In the second approach, these multilevel models will be extended with pupil-level explanatory variables defined as aggregates of the attitudes and behavior of the pupil's personal network. This approach is technically relatively simple because it remains inside the basic multilevel (hierarchical linear) model. It takes network effects into account to some extent but without the effects of partner selection, and without the more detailed feedback processes between networks, behavior, and attitudes. The main approach is the third one, using the models developed in projects 1 and 2 for the simultaneous evolution of networks and individual characteristics. This approach does take these dynamic feedback effects into account.

In later stages also the behavior and sanctions of pupils can be included as dependent variables into the analysis. Normative reference processes are reflected by the effects of aggregated attributes of all group members, whereas comparative reference processes are reflected by the effects of aggregated attributes of group members tied to the respondent in affective or other relevant relations (the personal network).

This study thus will enable us to show how group norms come into being and develop (micro-to-macro effects), and next how they affect individual behavior (macro-to-micro effects).

The first studies of the data focus on selection and influence processes.

2.4. Societal relevance

The project focuses on relevant topics like (anti-) social behavior, trust and reciprocity in relationships, and (anti-) school norms. More knowledge about the processes underlying the development of the related social norms and relevant networks could be of use for prevention of anti-social behavior and the development of an anti-school culture. If, e.g., Coleman's ideas about the effects of a school community on collective norms are supported, this could be an argument to invest thoroughly in the integration of parents in high schools. If the internal dynamics of pupils' networks are important, this could be an argument for intervention in those networks.

3. Data overview

In the data overview the name of each variable, a short description of the variable, the code and the position in the data file. The variable name refers to the variable name in the data file of the first wave. If the same variable is included in the subsequent files then they usually have an extension that is not given in the following list of variables (no extention or an 'a' at the end refers to the first wave, 'b' refers to the second wave, 'c' refers to the third wave, and 'd' refers to the fourth wave). For instance, in all waves it has been asked about the number of friends one has in the class, at school, and outside school. In the first wave data file this variable is called 'amoufria' (this name is also included in the following list of variables. The variable is called 'amoufrid', 'amoufric' and 'amoufrid' in the second, third and fourth wave. The code refers to the code that has been used in the questionnaire to identify the questions. 'V' refers to the first, 'W' to the second, 'X' to the third, and 'Y' to the fourth wave. The position gives the information about the position of the variable in the data file. The data of the first wave can be found in file 'pupilswaveV.sav', the data of the second wave in file 'pupilswaveW.sav', the data of the third wave in file 'pupilswaveX.sav', and the data of the fourth wave in file 'pupilswaveY.sav'.

The data overview for the information from the teachers follows the description of the data from the pupils. Here again 'V' refers to the first, 'W' to the second, 'X' to the third, and 'Y' to the fourth wave. The data of the first wave can be found in file 'teacherwaveV.sav', the data of the second wave in file 'teacherwaveW.sav', the data of the third wave in file 'teacherwaveX.sav', and the data of the fourth wave in file 'teacherwaveY.sav'.

Lees dit eerst: informatie over deze vragenlijst

Deze vragenlijst hoort bij een onderzoek van de Universiteit Utrecht naar leerlingen over sociaal gedrag.

We willen je vragen om de vragen zo goed mogelijk te beantwoorden. Boven de vragen staat steeds hoe je dat moet doen. Meestal moet je een antwoord aankruisen. Je kunt er ook altijd een opmerking bijzetten. Het kan zijn dat je op een vraag geen antwoord kunt geven. Vul dan gewoon niets in bij die vraag en ga verder met de volgende.

Een antwoord kan nooit fout zijn, het gaat ons om jouw gedrag en mening!

Als je een vraag niet begrijpt of je wilt iets weten: steek je vinger op, iemand komt je dan helpen. We vragen je dringend om niet te praten.

Als je een vraag verkeerd hebt ingevuld, kun je het antwoord veranderen door het foute antwoord door te strepen en bij het goede antwoord een pijl te zetten.

Let op: DEZE VRAGENLIJST IS ANONIEM! Niemand, dus ook niet de leraar/lerares of een klasgenoot, mag meekijken terwijl je deze lijst invult. Schrijf ook niet je naam op deze vragenlijst.

VRAGEN OVER JE SCHOOL EN JE KLASGENOTEN

Voor de volgende vragen heb je de namenlijst nodig: gebruik de nummers die voor de namen van je klasgenoten staan. Er wordt steeds iets over jou en andere leerlingen gevraagd. Vul alleen de nummers in van de klasgenoten waarvan jij vindt dat het klopt. De nummers vul je in, in de vakjes achter de vraag. Je kunt dus meerdere nummers van leerlingen per vraag invullen! Alle vakjes mogen ingevuld worden als dat nodig is. Als het bij een vraag voor niemand klopt, vul je daar geen nummers in. Je hoeft dus niet bij elke vraag per sé een nummer in te vullen.

Lees dit eerst: informatie over deze vragenlijst

Deze vragenlijst hoort bij een onderzoek van de Universiteit Utrecht naar leerlingen over sociaal gedrag.

We willen je vragen om de vragen zo goed mogelijk te beantwoorden. Boven de vragen staat steeds hoe je dat moet doen. Je kunt er ook altijd een opmerking bijzetten. Het kan zijn dat je op een vraag geen antwoord kunt geven. Vul dan gewoon niets in bij die vraag en ga verder met de volgende.

Een antwoord kan nooit fout zijn, het gaat ons om jouw gedrag en mening!

Als je een vraag niet begrijpt of je wilt iets weten: steek je vinger op, iemand komt je dan helpen. We vragen je dringend om niet te praten.

Als je een vraag verkeerd hebt ingevuld, kun je het antwoord veranderen door het foute antwoord door te strepen en bij het goede antwoord een pijl te zetten.

Let op: DEZE VRAGENLIJST IS ANONIEM! Niemand, dus ook niet de leraar/lerares of een klasgenoot, mag meekijken terwijl je deze lijst invult. Schrijf ook niet je naam op deze vragenlijst.

VRAGEN OVER JE SCHOOL EN JE KLASGENOTEN

Voor de volgende vragen heb je de namenlijst nodig: gebruik de nummers die voor de namen van je klasgenoten staan. Vul alleen de nummers in van de klasgenoten waarvan jij vindt dat het klopt. De nummers vul je in, in de

vakjes achter de vraag. Je kunt dus meerdere nummers van leerlingen per vraag invullen. Alle vakjes mogen ingevuld worden als dat nodig is. Als het bij een vraag voor niemand klopt, vul je daar geen nummers in.

Je bent nu klaar met de vragen. Wil je voor de zekerheid nagaan of je alle vragen hebt ingevuld?

Schrijf een paar zinnen over school. Hoe belangrijk is de school voor jou? Hoe zou het gedrag van een leerling op school zijn? Hoe gaan de leerlingen op school met elkaar om? Hoe reageren ze als andere leerlingen leuke of stomme dingen doen?

Hartelijk bedankt voor je medewerking!

Lees dit eerst: informatie over deze vragenlijst

Deze vragenlijst hoort bij een onderzoek van de Universiteit Utrecht over sociaal gedrag bij leerlingen.

We willen je vragen om de vragen zo goed mogelijk te beantwoorden. Boven de vragen staat steeds hoe je dat moet doen. Je kunt er ook altijd een opmerking bijzetten. Het kan zijn dat je op een vraag geen antwoord kunt geven. Vul dan gewoon niets in bij die vraag en ga verder met de volgende.

Een antwoord kan nooit fout zijn, het gaat ons om jouw gedrag en mening!

Als je een vraag niet begrijpt of je wilt iets weten: steek je vinger op, iemand komt je dan helpen. We vragen je dringend om niet te praten.

Als je een vraag verkeerd hebt ingevuld, kun je het antwoord veranderen door het foute antwoord door te strepen en bij het goede antwoord een pijl te zetten.

Let op: DEZE VRAGENLIJST IS ANONIEM! Niemand, dus ook niet de leraar/lerares of een klasgenoot, mag meekijken terwijl je deze lijst invult. Schrijf ook niet je naam op deze vragenlijst.

VRAGEN OVER JE SCHOOL EN JE KLASGENOTEN

Voor de volgende vragen heb je de namenlijst nodig: gebruik de nummers die voor de namen van je klasgenoten staan. Vul alleen de nummers in van de klasgenoten waarvan jij vindt dat het klopt. De nummers vul je in, in de vakjes achter de vraag. Je kunt dus meerdere nummers van leerlingen per vraag invullen. Alle vakjes mogen ingevuld worden als dat nodig is. Als het bij een vraag voor niemand klopt, vul je daar geen nummers in.

Lees dit eerst: informatie over deze vragenlijst

Deze vragenlijst hoort bij een onderzoek van de Universiteit Utrecht over sociaal gedrag bij leerlingen.

We willen je vragen om de vragen zo goed mogelijk te beantwoorden. Boven de vragen staat steeds hoe je dat moet doen. Je kunt er ook altijd een opmerking bijzetten. Het kan zijn dat je op een vraag geen antwoord kunt geven. Vul dan gewoon niets in bij die vraag en ga verder met de volgende.

Een antwoord kan nooit fout zijn, het gaat ons om jouw gedrag en mening!

Als je een vraag niet begrijpt of je wilt iets weten: steek je vinger op, iemand komt je dan helpen. We vragen je dringend om niet te praten.

Als je een vraag verkeerd hebt ingevuld, kun je het antwoord veranderen door het foute antwoord door te strepen en bij het goede antwoord een pijl te zetten.

Let op: DEZE VRAGENLIJST IS ANONIEM! Niemand, dus ook niet de leraar/lerares of een klasgenoot, mag meekijken terwijl je deze lijst invult. Schrijf ook niet je naam op deze vragenlijst.

VRAGEN OVER JE SCHOOL EN JE KLASGENOTEN

Voor de volgende vragen heb je de namenlijst nodig: gebruik de nummers die voor de namen van je klasgenoten staan. Vul alleen de nummers in van de klasgenoten waarvan jij vindt dat het klopt. De nummers vul je in, in de vakjes achter de vraag. Je kunt dus meerdere nummers van leerlingen per vraag invullen. Alle vakjes mogen ingevuld worden als dat nodig is. Als het bij een vraag voor niemand klopt, vul je daar geen nummers in.

Geachte mentor,

Uw school werkt momenteel mee aan een onderzoek naar sociale verhoudingen in de brugklassen. Binnenkort zullen wij vragenlijsten afnemen bij uw mentorklas. Als mentor beschikt u over belangrijke informatie voor ons onderzoek. Wij zouden u daarom willen vragen deze vragenlijst over uw mentorklas in te vullen. U kunt de vragenlijst via uw collega, of bij de afname van de vragenlijsten, retourneren. Bij deze vragenlijst vindt u een namenlijst; deze heeft u bij de beantwoording van sommige vragen nodig. Als u vragen heeft, kunt u ons bereiken via E.Roest@fss.uu.nl of tel. 030-2534544. Alvast hartelijk bedankt voor uw medewerking.

Geachte mentor,

Uw school werkt momenteel mee aan een onderzoek naar sociale verhoudingen in de brugklassen. Binnenkort zullen wij weer vragenlijsten afnemen bij uw mentorklas. Als mentor beschikt u over belangrijke informatie voor ons onderzoek. Omdat we geïnteresseerd zijn in de ontwikkeling van de brugklasser stellen we u sommige vragen meerdere keren dit jaar.

U kunt de vragenlijst via uw collega, of bij de afname van de vragenlijsten, retourneren. Bij deze vragenlijst vindt u een namenlijst; deze heeft u bij de beantwoording van sommige vragen nodig. Als u vragen heeft, kunt u ons bereiken via E.Roest@fss.uu.nl of tel. 030-2534748. Alvast hartelijk bedankt voor uw medewerking.

5. The ICS codebook series

The ICS Codebook Series is a project of the data coordination group of the Interuniversity Center for Social Science Theory and Methodology (ICS), at Groningen University, Utrecht University and Nijmegen University.

The Interuniversity Center for Social Science Theory and Methodology (ICS) is a graduate school and research center. In 1993 it was officially recognized by the Royal Netherlands Academy of Arts and Sciences (KNAW) as a research school. The ICS has its foundation in the Departments of Sociology of the universities Groningen, Nijmegen and Utrecht. The scientific director of the ICS is Tom Snijders. At the moment about 50 graduate students are carrying out ICS research projects.

The five main areas of the ICS Research Program are:

- Theoretical Tools for the Study of Behavior in Social Contexts
- Construction of Complex Data Sets and Models for Measurement and Statistical Analysis
- Families, Schools, Neighborhoods, Work and Leisure
- Organizations
- Ethnicity and Religion

The aim of the ICS Codebook Series is to document and make available ICS studies to the DANS Archive (former Steinmetz Archive). The documentation provided in this series is intended to enable researchers to decide whether or not this data set can be appropriate for their research interests. An ICS codebook contains the following information:

- Citation of the data set
- Study description (summary from DANS Archive's study description)
- Description of the data collection (chapters from books)
- Questionnaire(s) with frequencies of outcomes or, in case this information is not available, the questionnaire with a separate SPSS-frequencies listing for the relevant variables
- List of related publications
- List of currently available ICS codebooks

The other aims of the ICS data coordination group are described in the brochure "ICS DATA ARCHIVE: Collection, Documentation and Access to ICS Social Science DATA". This brochure

is meant for researchers, either inside or outside the ICS, who are interested in data sets that are connected, in one way or another, to research carried out in the ICS. This brochure gives an overview of data sets and of the way data archiving and collection has been set up within the ICS. Furthermore, it indicates how data sets and/or the related documentation can be obtained. The brochure is available upon request from the ICS.
